PHARMACOLOGICAL ACTION

Metamizole is an antipyretic from the antipyrine (pyrazolone) group. It possesses pronounced analgesic, antifebrile, antiinflammatory, antineuralgic, antirheumatic, spasmylytic and sedative properties. It eliminates the spasms of the forestomachs and regulates their motor function. It does not suppress the intestinal peristalsis. Metamizole restricts the inflammatory edema. It is well tolerated.

INDICATIONS

Catarrhal-spasmatic colic, meteorism and intestinal constipation in horses; spasms of the uterine cervix during birth; pains of urinary and biliary origin; neuralgia and nevritis; acute gastric dilatation, accompanied by severe colic attacks, for allaying the irritability of the animals and preparing them for stomach lavage in horses; esophageal obstruction; joint and muscular rheumatism; for preparation of surgical and obstetrical interventions.

SIDE EFFECTS

The continuous administration of high doses may cause leukopenia, agranulocytosis. Irritation may possibly occur after subcutaneous application.

CONTRAINDICATIONS

Simultaneous application with chlorpromazine, barbiturates and phenylbutazone.

MODE OF ADMINISTRATION (Rp)

Intramuscularly, intravenously, subcutaneously or intraperitoneally.

DOSEAGE

Average dose 10 - 20 mg/kg b.w.

Intramuscularly and subcutaneously:

- For large ruminants: 20 - 40 ml
- For horses: 20 - 60 ml
- For small ruminants and pigs: 2 - 10 ml
- For dogs: 1 - 5 ml
- For cats: 0.5 - 2 ml

Intravenously (slowly), intraperitoneally:

- For large ruminants and horses: 10 - 20 ml
- For small ruminants: 5 ml
- For pigs: 10 - 30 ml
- For dogs: 1 - 5 ml
- For cats: 0.5 - 2 ml

The injection of Analgin may be repeated at the same dose.

WITHDRAWAL PERIOD
