**PHARMACOLOGICAL ACTION**

Diclazuril, a benzeneacetonitrile derivative, is a synthetic compound of the triazinone family. According to the anticoccidial properties of triazinones, diclazuril is active against intracellular development stages of coccidia, namely during schizogony and gametogony. After diclurazil treatment, the first- and second-generation schizonts show extensive degenerative changes which are characterised by the loss of internal structure, the appearance of many intracytoplasmic vacuoles and incomplete merogony. Ultrastructural findings indicate that diclazuril treatment primarily affects the normal differentiation of the respective endogenous stages during parasite development.

**INDICATIONS**

As an aid in the prevention of clinical outbreaks of coccidiosis in:
- Broilers and replacements (up to 16 weeks) caused by *E. acervulina, E. maxima, E. brunetti, E. necatrix, E. tenella, E. mitis* and *E. praecox*.
- Growing turkeys (up to 12 weeks) caused by *E. adenoeides, E. gallopavonis* and *E. meleagris*.
- Guinea fowl caused by *E. numidae* and *E. grenieri*.

**CONTRAINDICATIONS**

No contraindications are known under correct usage of the product.

**MODE OF ADMINISTRATION**

*Orally*, mixing into the feed.
To ensure thorough dispersion of the product, it should first be mixed with a secondary premix or concentrate before incorporation in the final mix.

**TARGET SPECIES**

Broilers, replacements up to 16 weeks of age, turkeys up to 12 weeks of age, rabbits for fattening and breeding and guinea fowl.
**DOSAGE**

Diclazuril is well tolerated when fed at the recommended dose range of 0.8-1.2 ppm per ton of feed. Mix 160 to 240 gram of Coxiril® 0,5% premix per ton of complete feed to get a final dosage of 0.8 and 1.2 ppm, respectively. To ensure thorough dispersion of the product, it should be mixed with a suitable quantity (20-25 kg) of feed ingredients before incorporation in the final mix.

Feed containing Coxiril® premix may be given in pelleted or meal form to the animals from the 1st day of age.

**SIDE EFFECTS**

None under correct use of the product.

**WITHDRAWAL PERIOD**

Broilers, replacement pullets, guinea fowl and growing turkeys: 0 (zero) days. The use in rabbits is prohibited at least 1 (one) day before slaughter.

*Check local authorisation of the product.*

**STORAGE**

In the original packing, well closed, in dry and well-ventilated facilities, protected from direct sunlight.

**PACKING**

Paper bag with internal polyethylene layer of 20 and 25 kg.

**WARNING**

Do not mix or use simultaneously with any other anticoccidial. Operators should wear protective clothing, gloves, dust mask and goggles when mixing or handling Coxiril® 0.5% Premix.
