PHARMACOLOGICAL ACTION

Coyden® 25% is a coccidiostat product containing the active ingredient 3,5-dichloro-2,6-dimethyl-4-pyridinol (clopidol), which is a pyridone-derivative. It is effective against coccidiosis caused by *Eimeria tenella*, *E. acervulina*, *E. maxima*, *E. necatrix*, *E. brunetti*, *E. mitis* and *E. praecox*. On cellular level, clopidol leads to an inhibition of the development of sporozoites and trophozoites of the mentioned *Eimeria* species.

INDICATIONS

As an aid in the prevention of coccidiosis in broiler chickens and chickens reared for laying up to 16 weeks of age caused by *Eimeria tenella*, *E. acervulina*, *E. maxima*, *E. necatrix*, *E. brunetti*, *E. mitis* and *E. praecox*.

As an aid in the prevention of leucocytozoonosis caused by *Leucocytozoon smithi* in turkeys.

CONTRAINDICATIONS

Do not feed to laying hens. Do not feed to chickens reared for laying after 16 weeks of age. Do not administer clopidol to birds intended for breeding purposes. Do not mix with other anticoccidials.

MODE OF ADMINISTRATION

*Orally*, well homogenized into the feed. Coyden® should be thoroughly and evenly mixed in the feed in accordance with current good manufacturing practice for medicated feed.

TARGET SPECIES

Broiler chickens.
Chickens reared for laying up to 16 weeks of age.
Turkeys.

DOSAGES

For prevention of coccidiosis in broiler chickens and chickens reared for laying, Clopidol is most frequently used at a concentration of 125 ppm. This can be achieved by blending 500 g of Coyden® 25% per ton of feed. In case of severe infection the dosage can be increased up to 250 ppm.

For treating of leucocytozoonosis in turkeys, the amount of Clopidol is 125 to 250 grams per ton of feed.

The product must be mixed with other ingredients before feeding in order to have an optimal homogeneity and to avoid segregation. Mixing and conveying equipment should be properly cleaned to prevent carry-over.
SIDE EFFECTS
None under correct use of the product. The product has a high degree of safety margin.

WITHDRAWAL PERIOD
Chickens: Do not feed to pullets over 16 weeks of age.

*Check local authorisation of the product.

STORAGE
In the original packing, well closed, in dry and well-ventilated facilities, protected from direct sunlight at temperature below 25°C.

PACKING
Coyden® 25% is packed in 20 or 25 kg bags.
Check with your local Huvepharma® representative which pack sizes are available in your region as this may vary.

WARNING
When mixing, direct contact with the skin and mucous membranes should be avoided. Accidental ingestion should be avoided. Wear overalls, safety glasses, mask and impervious gloves when handling or mixing the product. Contaminated clothing should be removed and any splashes on to the skin should be washed off immediately. If accidental eye contact occurs, immediately rinse thoroughly with water. Seek medical advice if irritation persists. Wash hands after use.
